GitHub | LinkedIn

Junior AI Engineer with a B.E. in Artificial Intelligence and Data Science and hands-on experience developing LLM-powered applications, AI agents, RAG pipelines, and automated workflows. Skilled in Python, LangChain, LangGraph, REST APIs, and database integration, with a focus on building reliable AI solutions that automate business processes and improve user experiences.

PROFESSIONAL EXPERIENCE

Deluxe Digital Advertising | trainee Agentic AI Engineer — Jan 2026 - Present

- Developed an LLM-powered AI Sales Assistant using LangChain, LangGraph, Node.js, and MongoDB to support customer queries and sales workflows.
- Implemented RAG-based knowledge retrieval, product recommendations, lead qualification, and order-assistance workflows.
- Integrated lead capture, Telegram notifications, and external APIs to share customer requirements with the sales team.
- Worked on conversational workflow logic and API integrations to support automated customer interactions.

P4U Healthcare pvt ltd | Fullstack Developer Intern — Dec 2024 - July 2025

- Developed frontend components and Python-based REST APIs for a live healthcare platform.
- Implemented authentication and optimized database queries.
- Debugged and resolved application issues.

EDUCATION

Bachelor of Engineering, Artificial Intelligence and Data Science – 70% — June 2025
Angadi Institute of Technology & Management
Relevant Coursework: Artificial Intelligence, Database Management, Software Engineering

ADDITIONAL INFORMATION

- Programming Languages: Python, JavaScript, SQL
- AI & Generative AI: Large Language Models (LLMs), AI Agents, Generative AI Applications, LangChain, LangGraph, Prompt Engineering, Retrieval-Augmented Generation (RAG), Embeddings, Vector Search, Tool Calling
- Frontend Development: React.js, HTML, CSS, Responsive Web Design, User-Friendly Interfaces
- Backend & API Development: MERN Stack, Node.js, Express.js, Django, REST APIs, API Integration, Authentication & Authorization
- Databases: MongoDB, PostgreSQL, MySQL, Database Design, Database Management, Query Optimization
- Testing & Software Engineering: Debugging, Testing, Performance Optimization, Clean Code, Git, GitHub, Version Control, Postman
- Tools & Deployment: Docker, Flask, Cloud, Web Application Deployment, AI-Assisted Development

PROJECTS

AI Sales Assistant | LangChain, LangGraph, Node.js, MongoDB

- Developed an LLM-powered AI Sales Assistant using LangChain, LangGraph, and Node.js to support customer queries and automate sales workflows.
- Implemented RAG-based knowledge retrieval and product recommendation workflows to provide context-aware responses using business information.
- Integrated lead qualification, customer requirement collection, and automated lead notifications through external services.
- Worked on conversational workflow logic, API integrations, and database operations to support customer interactions and sales-team handoffs.

DeepFake Detection | Python, PyTorch, ResNet18

- Built a deepfake detection system using ResNet18 trained on FaceForensics++ and DFDC datasets.
- Implemented Grad-CAM visualization and automated PDF reporting with confidence scores and detected frames.
- Developed web-based inference using PyTorch, OpenCV, NumPy, Matplotlib, ReportLab, and Flask.
